

A grayscale, high-magnification microscopic image of intestinal tissue, showing the characteristic crypts and villi. The image is used as a background for the top half of the flyer.

Do you currently suffer from active Ulcerative Colitis?

Ulcerative Colitis (UC) is a lifelong condition that can seriously affect quality of life for thousands who suffer from this painful condition. Unfortunately, current treatments only help manage the symptoms – not the disease.

We are currently looking for volunteers to participate in a 38-week clinical research study to evaluate treatment and safety of an investigational medication compared to placebo (*an inactive look-alike substance*) in patients who have not received or not responded to other therapy in relieving active UC.

You may be qualified to participate if you:

- are between 18 and 65 years of age
- have a positive histological diagnosis of ulcerative colitis
- are willing to participate in the study, complete participant assessments and attend scheduled clinical visits
- satisfy all of the eligibility requirements

All study medication, placebos (*an inactive look-alike substance*) and study-related examinations and procedures are provided at no cost. Qualified participants may be eligible for reimbursement for time and travel.
